SUBSIDY REQUEST FOR CATSANBUL 2025

To Whom It May Concern:

I would like to request funding in the form of a Subsidy for the flight expense and hotel accomodations to get to join the \$Jup verse community in the following Catsanbul event, to be held in Istanbul on January 25th-26th, 2025.

It has not been long since I joined the Discord, so I fully understand giving priority to more seasoned members for the subsidy, however, with many months of using Jupiter products, I have discovered an affinity to the Catdets, the DAO, and the leadership surrounding Jupiter Finance. So much so, that I have decided to involve Jupiter Finance in my upcoming Solana project in any way that I can.

With the recent news of Jupuany 2025 and the approval of the recent proposal, I'd like to firmly state that I am not here to see my 'bags pump', nor any airdrops to farm. Simply, I am here for the long term development of Jupiter Finance and experiencing/learning from your leadership. One day I hope my upcoming Solana project can mimic a well seasoned DAO protocol such as Jupiter (future-tense).

My recent outlook in becoming a Catdet stems from a need to have the support, counseling, and guidance from a well established and reputable organization (Jupiter Finance) for my next upcoming Solana project. If allowed, I would open the project for the Catdets to provide feedback, and do what you all do best. Create solutions.

Lastly, with my own funds in hand, a trip to Istanbul to connect with the Jupiter leadership and Catdets, is a no-brainer for me. Therefore, in the meantime, I will make a great effort to fund a trip to Istanbul and hope to meet as many of you out there.

The following below is a quick snippet of my history, background, experience, and current projects.

Experience up to today; 9 years in the workforce as an Engineer and 9 years losing money by experimenting heavily in the Crypto and DeFi space.

About me:

I am an Engineer by Trade (Civil Engineering Graduate) and an employee to a Construction Company in California, United States, as a Project Manager / Engineer hybrid (\$10m+ in revenue building habitable structures).

My highest achievements have been managing several million dollar Public Improvements projects for a Local Jurisdiction (City Government) from Concept (Community Approval Processes) to Construction.

Current proud achievements are based on the level of courage, humility, and creativity I have cultivated in the contribution to the current success of the Construction company.

Current Web3 projects:

- 1) SpaceBoysNFTs

OpenSea: <https://opensea.io/collection/spaceboysnft/>

- 2) Pearl CTO

<https://www.pearlcto.com/>

- 3) [REDACTED]

Real Estate Project currently in Pre-Development. Waiting on funding.
